## Magnetic Inductive Flowmeter

- **for electrical conductive liquids**
- **independent of viscosity, density, pressure and temperature**
- **practically no pressure loss**
- **high measurement accuracy**
- **large measurement range span**
- **robust housing**
- **maintenance free**
- **compact- or separate version**
- **measuring ranges 0...6 m<sup>3</sup>/h to 0...1130 m<sup>3</sup>/h**
- **max pressure: 40 bar, max temperature: 180 °C**

### Description:

The magnetic inductive flowmeter operates without moving parts. It is maintenance free and there is because of a free tube cross section practically no pressure drop. Measuring ranges from 0,72 until 1131 m<sup>3</sup>/h with flange connections DN 32 until DN 200 are available.

The device comes as standard version with a dual digital display with a simple menu driven operation/programming (e.g. measuring range, pulse rate, low flow cut off). For example the flow volume, device status, limit values, flow direction, empty pipe detection can be displayed. The display electronic operates with a 16 bit microcontroller by what a fast reaction time <100 ms can be achieved. In addition to the frequency and analogue outputs, two alarm outputs are also available as output signals. The flowmeters are equipped with 3 independent totalisers to count partial and total amounts.

### Typical applications:

Because of the full bore and the various lining- and electrode material the flowmeter DM08 can be used for almost all media with the indicated minimum conductivity of 50 µS/cm. Viscosity, impurities in the media or density fluctuations have no impact for the measurement. Particularly for the following sectors the DM08 can be used:

- water and waste water
- mining, cement and mineral material
- cellulose- and paper industry
- acids and lyes
- agriculture
- energy industry and public utility
- paint industry

## Operating principle:

The magnetic inductive flow measuring is based on the Faraday's induction principle. The to be measured liquid (electric conductive) flows perpendicular to a magnetic field. Thereby voltage is induced into the liquid.

The voltage is tapped by 2 electrodes which are inserted into the measuring tube and analysed by the electronic.

The voltage level is proportional to the flow velocity.

## Measuring ranges and dimensions:

Nominal size	measuring range [m³/h]	Factory set measuring range [m³/h] equates 4...20 mA	Pressure rate flange EN1092-1 *)	Installation length hard rubber and PTFE (with protective ring)

## Technical Data:

<b>Max. pressure:</b>	see table Measuring ranges and Dimensions
<b>Medium temperature:</b>	PTFE: -20...100 °C at 40 bar -20...150 °C at 25 bar -20...180 °C at 16 bar  hard rubber: 0...90 °C process connections steel: ≥-10 °C process connections st. steel: ≥-20 °C
<b>Environment temperature:</b>	PTFE: -20...100 °C hard rubber: 0...80 °C display electronics: -20...50 °C process connections steel: up to -10 °C process connections st. steel: up to -20 °C (below 0 °C the readability of the LCD display is limited)
<b>Accuracy*:</b>	±0,5 % of m.V. (v = 1...10 m/s) ±0,4 % of m.V. ± 1 mm/s (v < 1 m/s) additionally for frequency output: ± 0,05 % pro 10 K analogue output: ± 0,1 % pro 10 K
<b>Repeatability:</b>	±0,15 % of m.V.
<b>Response time:</b>	< 100 ms (depending on the setting of the electronics)
<b>Min. conductivity of medium:</b>	water and other conductive liquids ≥ 50 µS/cm
<b>Flow display:</b>	LCD with backlight optional units: m³, l, US Gallon, UK Gallon, ft³, kg, t. Display of instantaneous value and/or total quantity, 3 independent counters

\* Reference conditions: media temp.. 10...30 °C, environment temp. 20...30.°C, warm-up time: 30 min, straight pipe lengths, inlet section 5 x DN, properly centered and emptied

## Dimensions:

### Compact Design:

## Output Signal:

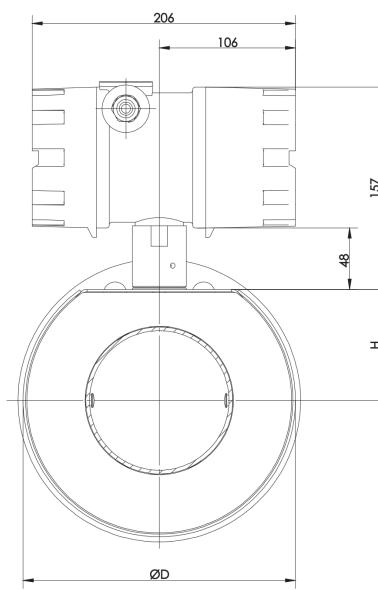

<b>Frequency output</b>	
<b>Configuration</b>	pulse- or frequency signal available
<b>Pulse significance</b>	≤ 1000 Impulse/s
<b>Pulse width</b>	≥ 0,1 ms (max. 2 s), adjustable
<b>Frequency</b>	0...1 kHz
<b>Signal form</b>	square wave signal
<b>Analogue output</b>	
<b>Operating range:</b>	0 ... 20 mA / 4 ... 20 mA, available
<b>Current limitation:</b>	21,6 mA
<b>Max. burden:</b>	600 Ω
<b>Short circuit proof:</b>	permanent
<b>Alarm output</b>	
<b>Quantity:</b>	2
<b>Version:</b>	optocoupler
<b>Function:</b>	status output: preflow, backflow, MIN flow rate, MAX flow rate, alarm (adjustable)
<b>Switching values:</b>	U <sub>max</sub> : 30 V; I <sub>max</sub> : 60 mA; P <sub>max</sub> : 1,8 W

## Electrical Data

<b>Electrical connection:</b>	cable screw M20 x 1,5
<b>supply voltage.:</b>	230 VAC -15 % / +10 %, 50/60 Hz 19...36 VDC
<b>Display:</b>	two-line display
<b>Prot. class EN 60529:</b>	IP67

## Material

<b>Measuring tube:</b>	stainless steel
<b>Process connections:</b>	steel or stainless steel
<b>Lining:</b>	PTFE or hard rubber
<b>Electrodes:</b>	st. steel 1.4571 or Hastelloy C276
